

Hospital Management System

Undergraduate Project

Submitted in partial fulfilment of the requirements of software development project 1 for the degree of B.Sc. Engineering in CSE.

Under Supervision of

Md. Saddam Hossain

Lecturer, Department of C.S.E

Bangladesh University of Business and Technology

Hospital Management System

Declaration of Authorship

We, Fariya Ahmed, Md.Nabil Rahman, Shanto Sikder, Mosharof Parves, and Md. Amzad Hosen declare that-

1. This project titled, " Hospital Management System" and the work presented in it is our own.
2. We confirm that: This work was done entirely while in candidature for a B.Sc Engineering in CSE degree at this University.
3. We own every single part of this Software.

Dedication

Dedicated to our parents for all their love and inspiration.

Abstract

Hospital management system is a computer system that can be used to manage the information of any Hospital. The admin panel has full control over the software and it can be fully customized according to the specific needs of any Hospital management system. And also The User panel can know some info for their needs. That's why it's a universal project to manage the info.

Approval

This project " Hospital Management System " was submitted by Fariya Ahmed, Md.Nabil Rahman, Shanto Sikder, Mosharof Parves, and Md. Amzad Hosen. ID No. 2021120317, 20211203047, 20211203048, 20211203050, 20211203053.

Department of Computer Science and Engineering (CSE), Bangladesh University of Business and Technology (BUBT) under the supervision of Md. Saddam Hossain; Lecturer, Department of C.S.E has been accepted as satisfactory for the partial fulfillment of the requirement for the degree of Bachelor of Science (B.Sc. Engg.) in Computer Science and Engineering and approved as to its style and contents.

Md. Saddam Hossain

Lecturer, Department of C.S.E

Bangladesh University of Business and Technology (BUBT)

Chapter - 1

Introduction

This chapter gives an overview about the aim, objective and operation environment of the system.

Project Aim and Objective

The project aims and objectives that will be achieved after completion of this project are discussed in this subchapter. The aims and objectives are as follow:

- To be familiar with resource reusability by making user defined function.
- Admin login page where admin can add Patients, Doctors, also can view them.
- A search column to search availability of Patient.
- User login page where user can find Doctor Information, and Doctor Booking Information.
- To make the program easy while running it.
- To concise the memory of program as far as possible.
- To get an idea about making a simple project using C++.
- To be able to work in a group as a team sharing different responsibilities.

Operation Environment

In computer software, an operating environment or integrated applications environment is the environment in which users run application software. The environment of a user interface is provided by an application manager and usually an application programming interface (API) to the application manager.

We used Code::Blocks-20.03 for our development.

Chapter – 2

System Analysis

System Requirement and Specification

In order to run this software we are going to need Code::Blocks-20.03 And GNU GCC Compiler.

Existing VS Proposal

The proposed system is intended to make life easy. The main purpose of the project is to build a software which make everything easy. It's is so simple to use and various important task like add Patient and Doctors also can view and delete them. And also can manage the Hospital.

Software Tool Used

Code Editor – Code::Blocks-20.03

Programming language – C++

Compiler - GCC compiler

Chapter - 6

Conclusion and Future Work

In this software project we got to learn many things like how to handle a project efficient in a way, how to handle file properly, how to build an entire project from the scratch and the interconnection between several parts of a project. We were not able use some interesting features due to some restrictions and lack of knowledge. We are hoping that in the stable release we will be able to add some features like –

1. Stunning Graphical User Interface (GUI)
2. And many more interesting features.
